

suppose if you have some tables in your database and when there is no data in tables you want to show a default message like **No Result Found** to show user that data is not available in database. For Example My Table structure is :

SKILL_NAME	SKILL_LEVEL
PHP	5
HTML	8
JAVA	5.5

and you wanna show **No Result Found** if a query doesn't return any matching result. For this you can use below code in laravel. You can use the @forelse (<https://laravel.com/docs/5.6/blade#loops>)

```
@forelse($candidateskill as $getData)
    {{ $getData->SKILL_NAME }}
    {{ $getData->SKILL_LEVEL }}
@empty
    No Data
@endforelse
```
