

*magento seo friendly urls, magento 2 seo friendly url, magento 2 use web server rewrites, magento 2 url rewrite, seo url magento, magento 2 url rewrite not working, magento 2 custom url rewrite, magento 2 rebuild url rewrites*

when i was a newbie to Magento and Apache conf. I was using Magento 1.8.0. I have configured the path so as to remove index.php from the URLs for my pages eg from

/magento/index.php/electronics/cell-phones.html

to

/magento/electronics/cell-phones.html

so now then question is **How to Use SEO friendly URLs for Magento ?**

the simple and shortest answer is : In your .htaccess file find Rewrite Base/ and replace it with Rewrite Base/magento if it is commented using # un comment it.

now your urls will not have index.php in it.Hope this will help
