while working on a php file containing string **“This is (Name). I live in (India). and so on with other brackets as well”** , i was trying to extract whatever text comes inside (). Desired output should be Name , Turkey . I have tried this. But Only getting first output which is Name but require Turkey and so on values whatever comes in brackets if the length of text increases.

If you are also facing this issue then you can try this below code

```
$string = 'This is (Name). I live in (India). and so on with other brackets as well';
```

```
preg_match_all('/\((.*?)\)/i', $string, $matches);
```

```
print_r($matches[1]);
```
