if you re new to Magento 2 and front-end development and just know how to use html and css, And you want to customize blank theme in Magento 2 to understand how the things work.If you tired of reading the documentation of Magento 2 but didn t get any idea of how to do that, and willing to customize the theme or confused where to change between the css files or the hole layout (the xml) files? Then this Post is for you.

You can customize your theme by a simple css file.To add custom CSS theme file to Magento 2, you need to:

1. Create file custom.css in pub/media/
2. Go to Admin > Content > Configuration > [choose the theme currently in used] > HTML Head > Scripts and Style Sheets
3. Input:

However, the method above is not recommended in Magento 2. In Magento 2, you should style by [creating a child theme](#) then edit CSS and LESS files that is extended from the parent theme.
