

magento 2 reindex from admin,magento reindex not working,magento 2 reindex cron,magento 2 reindex code,magento 2 cron not reindexing,magento 2 reindex without ssh,magento 2 product not updating,magento reindex ssh

i was facing an issue that i was not able to do reindexing in magento 2. After google I get the solution that We can reindex with shell command

```
php dev/shell/indexer.php reindexall
```

But it s giving error

Could not open input file: dev/shell/indexer.php

As I can t see shell folder within dev.

after some research i found this below solution

fire this command from magento root via terminal

reindex all : **php bin/magento indexer:reindex**

reindex particuler : **php bin/magento indexer:reindex indexer_name**

Where **indexer_name** Should be

catalog_category_product,catalog_product_category,catalog_product_price,catalog_product_attribute,cataloginventory_stock,catalogrule_rule,catalogrule_product,catalogsearch_fulltext.
