

how to add multiple currency in magento 2,magento 2 change currency symbol,magento 2 currency rates,magento 2 currency switcher,add new currency in magento 2,magento 2 multiple currencies,how to setup multiple currency in magento 2,magento 2 show currency switcher

I was trying to enable more currencies and then try to import rates from web service in Magento 2. When I did Stores > Currency > Currency Rates > Import

It was showing following error:

We can't retrieve a rate from

<http://www.websvcx.net/CurrencyConverter.aspx/ConversionRate?FromCurrency=INR&ToCurrency=GBP>.

We can't retrieve a rate from

<http://www.websvcx.net/CurrencyConverter.aspx/ConversionRate?FromCurrency=INR&ToCurrency=USD>.

if you are also facing this type of issue then apply below steps

If you visit that URL, you'll notice it says:

```
{"code": "PAGE_NOT_FOUND", "message": "Page not found"}
```

Not good. If you then go to websvcx.net and scroll through its list of API, you'll notice that none refer to currency conversion. Also, not good.

If you web search for currency import in Magento 2, you'll come to this [shopgo module](#), which says:

Magento 2.0's default and only currency import service WebserviceX tends to go down from time to time. And sometimes, it returns empty results for some currencies.

Three times the charm: websvcx.net is probably not going to work. Try installing the module from shopgo, which uses other providers.
