

Here i will demonstrate to you a snappy tip to expel your site pages from google search list and cache, Google naturally crawl site pages and ordered those pages in query item, You won t not have mindful about that google has filed your some delicate pages which you would prefer not to show entire world, If you are as of now mindful that may happen, you can make robots.txt document to advise web index which pages need to crawl and which are not, But rather in the event that you neglected to make robots.txt record and your touchy pages has been filed in google hunt and you need to desperately evacuate that pages then this brisk tips is exceptionally helpful.

google web master tools .

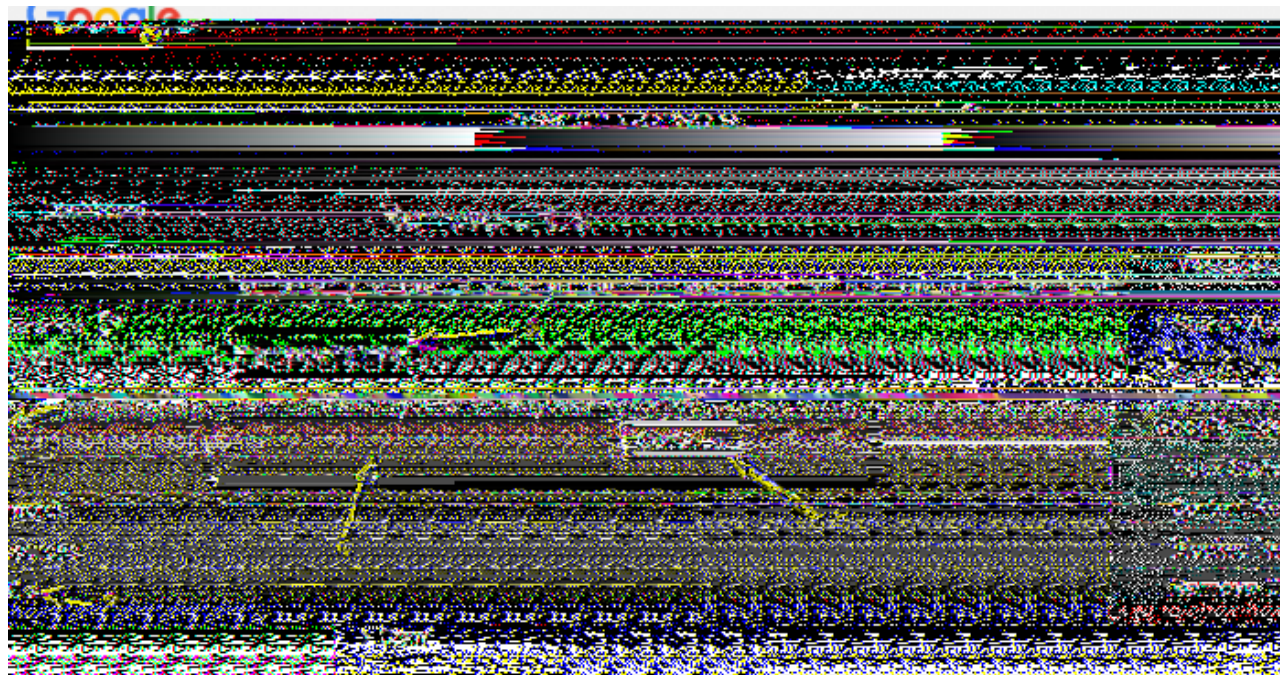

**Step-1:** Open google web master and login with your gmail id. go to:

<https://www.google.com/webmasters>

**Step-2:** After that you ll see your added website on dashboard, If you are using google web master first time then you you have to register your website with google web master

**Step-3:** After that you ll able see your website on the web master dashboard now click on your website link.

**Step-4:** After clicking on the link new dashboard will be opened where you can see your website analytic report, Go to the link on right panel **Google Index => Remove URLs**, Then new window will be open where you can see a button called **Temporarily hide**, click on it. a popup will be open where you have to enter full URL of the website and finally click on continue button.

Your link removal request will be sent to google and your link will be removed from google search almost 24-48 hour.
